

Sloan Spaeth

Vice President

Sloan brings over 22 years of engineering, finance, and commercial real estate experience with some of the largest and most complex infrastructure and real estate projects in Central Texas.

Sloan began his career as a Civil Engineer working on public projects in San Antonio and Austin. After obtaining his MBA from the University of Texas at Austin, Sloan began working on behalf of large users of commercial real estate, helping them maximize value and manage risk. He has planned and executed the cash flow, financing, transaction structure and negotiations for several projects exceeding \$100mm, including Concordia University's unprecedented relocation from an 11-acre downtown campus to a 400-acre former Schlumberger R&D campus.

In 2007, Sloan and five partners founded AQUILA Commercial, a full-service commercial real estate services firm, where he worked on numerous high-profile commercial real estate projects and co-managed the firm's growth to be second only to global giant CBRE in Austin.

Sloan brings 13 years of experience structuring, syndicating, and executing office, multi-family, and special-use developments.
